**WATER & WASTEWATER
EQUIPMENT COMPANY**

FILTER PRESS

Water & Wastewater Equipment, is a leader in the water treatment industry, with over 35 years in the business, our experienced engineering staff can design and build a filter press system for your specific requirements.

DON'T LET DIRTY PLANT AIR RUIN YOUR SYSTEM!

With WWE's fully - hydraulic closures (one of the fastest operating systems on the market) contaminated plant air never enters the system. This eliminates corrosion, and pitting on the pistons or sleeve, and seals do not deteriorate as they do in ordinary air-over-fluid systems used by many of our competitors. That is why WWE's filter presses need so little maintenance. The WWE filter press average life span is over 20 years, often even longer.

Let one of our qualified sales team member discuss a low cost standard filter press, or discuss a custom-built option uniquely designed for your specific operations. Several options are available.

Perhaps you just need a part for your current filter press but are not sure what it is? WWE can help you determine what the specific item you will need to get your company back up and running! We also have in stock a complete line of accessories in stock and ready to ship.

Manually-operated hydraulic cylinder on gasketed filter press with air blow-down manifold. heavy-gage steel frames are sandblasted to white metal before WWE applies multi-coats of 2-part epoxy.

Plate shifter, air-blow down manifold, and fully-automatic hydraulic closure on WWE filter press.

all you can get with a WWE FILTER PRESS

Expandable side bars let you easily increase filter press throughput when your plant increases production. (Our competitor's side bars are welded; in order to expand, you're forced to buy a whole new filter press!)

Semi-Automatic hydraulic closure with removable expansion piece and air blown-down manifold on gasketed filter press.

Fully-automatic closure, plus air blown-down manifold on an easily-expandable gasketed filter press with self-dumping Cake Cart.
